

🐱 Cats:

Carnivores: They mainly eat meat.

Common foods:

Commercial cat food (wet or dry)

Cooked chicken, fish (without bones)

Special treats for cats

They need: Taurine (an essential amino acid found in meat), so a meat-based diet is important.

🐶 Dogs:

Omnivores: They can eat both meat and some plant-based foods.

Common foods:

Commercial dog food (wet or dry)

Cooked meat, rice, vegetables

Dog-safe fruits (like apples or bananas) as treats

They need: A balanced diet with protein, fat, fiber, vitamins, and minerals.

⚠️ Note: Some human foods are dangerous for both (e.g., chocolate, onions, garlic, grapes). Always give food suitable for pets.
